

Senior Software Engineer | Backend, Full Stack & Software Architecture | Node.js, TypeScript, AWS, distributed systems, and applied AI

Brazil, UTC-3 | Remote / Global | English: B1+/B2, daily professional use | Email: ivanhoinack@gmail.com

Schedule: [Meeting with Ivan Hoinacki - 30min](#) | [LinkedIn](#) | [Website](#) | [GitHub](#)

Summary

Senior Software Engineer and Software Architect with more than 15 years of experience designing, modernizing, and operating distributed systems, cloud platforms, and critical product integrations. Hands-on background across travel, e-commerce, retail, banking, ERP, and industrial automation, combining technical depth with leadership of complex deliveries.

At Luxury Escapes, I own end-to-end changes across B2C, B2B, and administrative services and interfaces in the Experiences vertical, covering search, availability, bookings, vouchers, orders, analytics, and global travel provider integrations. I scaled an AI-powered curation platform roughly 16-fold and work hands-on with TypeScript, Node.js, React, Ruby, PostgreSQL, BigQuery, Datadog, and AWS.

I work in remote international teams as a hands-on engineer and technical reference, turning ambiguous problems into architecture, tested software, observable rollouts, and reliable operations. I design agent ecosystems around specifications, service-level context, automation, tests, and human review while retaining accountability for security, quality, and production behavior.

Highlights

- Expanded Luxury Escapes' AI-powered attraction curation roughly 16-fold, from 75 attractions in 5 cities to more than 1,193 attractions across 18 countries and 56 cities, with automated validation against hallucinations, duplicates, and invalid geographic data.
- Evolved B2B integrations with global travel providers across availability, bookings, vouchers, cancellations, fares, reconciliation, and external failure handling.
- Reduced distributed logging costs by approximately 40% at ALLOS by combining OpenTelemetry, Prometheus, and Grafana in a hybrid observability architecture.
- Standardized CI/CD, GitOps, quality, security, and cloud governance across 67 repositories, creating a shared operational foundation for more than 12 multidisciplinary squads.
- Reduced critical bugs from 69 to 35 in 4 weeks by structuring triage, impact-based prioritization, coordinated fixes, and continuous validation with the team.
- Built Limber Software's web engineering foundations from scratch and helped scale an initial team of 2 into specialized backend, frontend, mobile, and quality teams.

Agent Engineering Projects and Training

- [Codex Workflow Playbook](#), an interactive English-language web application that teaches engineers how to design and validate a Codex engineering environment through guided journeys, checkpoints, diagrams, and templates for configuration, hooks, skills, subagents, MCPs, memory, and context management.
- [Team Claude Config](#), a versioned, one-command distribution that standardizes team use of Claude Code and Cursor through guardrails, workflows, specialized agents, lifecycle hooks, MCP integrations, and service-level technical context.
- [AI Workshops](#) and [Workshop 02 - Claude Code Ecosystem](#), practical English-language materials used to train engineers in agent configuration and operation, with exercises covering hooks, MCPs, skills, context, parallel investigation, code review, and complete workflows from request to pull request.

Core Skills

- **Backend:** TypeScript, Node.js, NestJS, Express, Java, Spring Boot, Spring Data (JPA/Hibernate), Spring Security, Actuator, Python, FastAPI, Ruby on Rails, Go, C#, ASP.NET, REST, GraphQL, gRPC, OpenAPI.
- **Frontend:** React, Angular, AngularJS, and Vue.js.
- **Cloud and platform:** AWS Lambda, API Gateway, Cognito, S3, EventBridge, SNS, SQS, SST, Azure, GCP, Docker, Kubernetes, Terraform, Helm, GitHub Actions, CircleCI, GitLab CI, and Azure DevOps.
- **Data and observability:** PostgreSQL, PostGIS, DynamoDB, MongoDB, Redis, BigQuery, Snowplow, Datadog, OpenTelemetry, Prometheus, and Grafana.
- **Architecture and messaging:** Microservices, event-driven systems, Kafka, EventBridge, SNS, SQS, retries, DLQs, consumers with business-key idempotency, DDD, BFF, serverless architecture, platform modernization, and monolith decomposition.
- **Blockchain and digital assets:** Solidity, ERC-721 contracts, Polygon, Web3, Hardhat, IPFS, Alchemy, and MoonPay.
- **AI, agents, and automation:** Claude Code, specialized agents, spec-driven development, hooks, skills, MCP, Anthropic and OpenAI APIs, RAG, generative AI governance, prompt engineering, rule-based validation, and model workflows.
- **Leadership:** architecture reviews, code reviews, mentoring, technical planning, delivery alignment, engineering standards.

Professional Experience

Senior Software Engineer

Luxury Escapes (luxuriescapes.com), Remote | Melbourne, Australia (February 2026 - Present)

Global travel e-commerce company offering accommodation, experiences, tours, transfers, and travel packages across international markets.

- Own end-to-end changes across a distributed ecosystem of B2C, B2B, and administrative services and interfaces for search, availability, bookings, vouchers, and provider integrations in the Experiences vertical.
- Implement cross-domain changes in Node.js, TypeScript, and Ruby services owned by different squads, validating contracts, behavior, and integration before review by the owning team and production rollout.
- Scaled an AI-powered attraction curation pipeline from 75 attractions in 5 cities to more than 1,193 attractions across 18 countries and 56 cities.
- Automated curation validation without requiring manual review for each attraction, combining guardrails, geocoding, Google Places, deduplication, and quality rules to block invalid or hallucinated data before publication.
- Evolved B2B integrations with global travel providers across availability, bookings, vouchers, cancellations, fare mapping, reconciliation, and external failure handling.
- Built the Experiences Passport MVP across backend and customer experience, including the data model, APIs, voucher issuance and lifecycle, redemption synchronization with orders, search result identification, and presentation in My Escapes.
- Built data models and telemetry with BigQuery, Snowplow, and Datadog to measure conversion, provider behavior, curation quality, and root causes of production failures.
- Increased flow reliability through APM, structured logs, monitors, cache warming, rate limiting, progressive rollout, and investigation of external dependencies driven by metrics and traces.
- Integrated coding agents into the engineering workflow with repository-level context, executable specifications, automated tests, and human review while retaining ownership of security, rollout, and production operations.
- Led an internal technical workshop on Claude Code productivity and agent ecosystem design, covering hooks, MCPs, service-level context, skills, and development workflows ([workshop materials](#)); also presented an AI-powered travel intelligence prototype at the Luxury Escapes 2026 Hackathon.

Technologies: TypeScript, Node.js, NestJS, Ruby, PostgreSQL, PostGIS, BigQuery, Snowplow, Datadog, AWS, Docker, GitHub Actions, OpenAI API, Nominatim, Google Places API.

Software Architect

ALLOS (allos.co), Remote | Brazil (January 2025 - January 2026)

One of Brazil's largest shopping center operators, with 56 malls and a high-volume distributed digital ecosystem.

- Defined software architecture decisions for a distributed ecosystem spanning 56 malls, covering platform engineering, observability, security, cloud, DevOps, and AI adoption.
- Supported the technical evolution of 12+ squads across GMV capture, benefits, promotions, loyalty, backend, frontend, QA, downstream, and upstream domains.
- Designed distributed observability patterns with OpenTelemetry, Application Insights, Prometheus, and Grafana, reducing logging costs by approximately 40%.
- Established technical health dashboards and DORA metrics to guide engineering improvements in lead time, change failure rate, MTTR, and deployment frequency.
- Standardized engineering practices across 67 repositories, including CI/CD, GitOps, infrastructure as code, quality gates, SAST/SCA, OWASP Top 10, and cloud governance.
- Led the architecture for generative AI adoption across model versioning, governance, security, RAG strategies, and internal proofs of concept.
- Built an invoice capture proof of concept with Python, FastAPI, Azure Functions, and AI, reducing processing time from approximately 20 to 7 seconds.
- Created the Benefits Virtual Assistant with LLM and RAG for the websites and apps of 56 malls, using a per-mall indexed knowledge base, context guardrails, and an A/B rollout to reduce support queues and peak-season operating costs.

Technologies: TypeScript, Node.js, NestJS, Go, Python, FastAPI, Azure AKS, Azure Functions, Azure Service Bus, OpenTelemetry, Prometheus, Grafana, Terraform, Helm, Kubernetes, PostgreSQL, MongoDB Atlas, Redis.

Technical Lead

ília digital (ilia.digital), Remote | Brasília, Brazil (September 2020 - January 2025)

Advanced Technical Lead

- Served as a technical consultant to Commercial and Delivery teams, representing ília in engagements with strategic clients and guiding architecture decisions, team enablement, and technical workshops.
- Structured engineering improvement plans with clients by combining process assessment, technical prioritization, and adoption roadmaps to improve team health and delivery efficiency.
- Received the 2023 ília Awards in the Learning and Creativity categories for contributions to learning and technical innovation.

Tech Lead

- Led projects for clients in financial services, retail, and digital platforms, defining architecture, feature decomposition, and delivery planning for multidisciplinary squads.
- Took over an international Open Banking project for a major UK bank after the original technical lead left, coordinating 2 remote, multicultural teams on distributed service architecture and the validation of security, GDPR, and KYC requirements.
- Served as a technical reference through code reviews, mentoring, engineering guilds, standards, and alignment with Product, Delivery, and Commercial teams.

Senior Software Engineer

- Built and modernized services with Node.js, TypeScript, NestJS, Express, Java, and Spring Boot, as well as React and Vue interfaces, applying Clean Architecture, DDD, REST APIs, gRPC, Kafka, SQS, and Terraform infrastructure as code across Azure, AWS, and GCP.

- Built Java/Spring Boot services with Spring Data (JPA/Hibernate), Spring Security, Actuator, PostgreSQL, and Redis, plus Kafka consumers with retries, a DLQ, and business-key idempotency; cleared the DLQ backlog after tuning consumer concurrency.
- Developed a serverless digital asset platform in TypeScript using AWS Lambda, API Gateway, Cognito, DynamoDB, S3, and EventBridge, integrating Solidity ERC-721 contracts on Polygon, IPFS storage, and Alchemy and MoonPay webhooks for asynchronous transaction creation, transfer, and tracking.

Technologies: Java, Spring Boot, Spring Data (JPA/Hibernate), Spring Security, Actuator, Kafka, PostgreSQL, Redis, TypeScript, Node.js, NestJS, Express, Go, React, AWS Lambda, API Gateway, Cognito, DynamoDB, S3, EventBridge, SST, Solidity, Polygon, IPFS, Web3, Azure AKS, Azure Functions, Azure Service Bus, Docker, Kubernetes, Terraform, MongoDB, Jest, Supertest, Pact.

Staff Software Engineer

Grupo Limber Software (limbersoftware.com.br), Pato Branco - Paraná, Brazil (December 2016 - March 2020)

Staff Software Engineer (Jan 2019 - Mar 2020)

- Trained developers and coordinated work across multiple projects, establishing agile practices, automated deployment, quality criteria, security checks, and production traceability.
- Aligned Engineering, Commercial, and client stakeholders during new project planning and helped reduce incidents by approximately 45% and deployment time by 50%, while increasing automated test coverage by approximately 80%.

Tech Lead (Dec 2017 - Dec 2018)

- Scaled the team from 2 people into multidisciplinary backend, frontend, mobile development, and quality teams.
- Led architecture, delivery, technical planning, client alignment, vendor relationships, and engineering quality across tourism, hospitality, entertainment, e-commerce, and management platforms.

Senior Software Engineer (Dec 2016 - Dec 2017)

- Joined as the first senior software engineer and built the production foundations for the web products from scratch, including backend architecture, databases, frontend standards, Git Flow, and CI/CD.
- Delivered projects for clients including Itaipu Binacional, Parque das Aves, Serra Verde Express, Magic City Park, and Giordani Turismo, among others.

Technologies: TypeScript, Node.js, Angular, AngularJS, Electron, MongoDB, PostgreSQL, Firebird, Azure, GCP, Linux, Docker, Kubernetes, Jenkins, Azure Pipelines, SonarQube.

Full Stack Developer

XPert Tecnologia e Automação (xpert.com.br), Pato Branco - Paraná, Brazil (February 2013 - August 2015)

- Helped modernize a legacy desktop ERP into a modern web architecture, contributing to the concept and implementation of the new technical foundation.
- Developed and maintained Node.js and PHP backends, as well as JavaScript, ActionScript, HTML5, and CSS3 interfaces integrated through REST APIs with JWT authentication and role-based authorization.
- Delivered architecture and shared component improvements that reduced the time required to develop new features and increased overall system performance.
- Worked on integrations with industrial IoT devices, sensors, telemetry, automation systems, MQTT, WebSockets, and real-time dashboards.

Technologies: Node.js, Express, TypeScript, PHP, JavaScript, ActionScript, HTML5, CSS3, MySQL, SQL Server, MQTT, WebSockets, Git, Jenkins, Docker.

Earlier Experience

SESMO Software for Occupational Medicine - Full Stack Developer (July 2012 - January 2013)

Built ASP.NET/C# web applications for occupational medicine, optimized Firebird queries from ~10s to 1s, automated tax/legal reporting, and integrated external government systems.

Viasoft Softwares Empresariais - QA Analyst (November 2011 - March 2012)

Built automated tests with Selenium WebDriver for corporate ERP systems, regression plans, functional/integration tests, and Oracle validation queries.

World Line Net - Network Engineer / Web Developer (January 2010 - September 2010)

Configured Cisco, Mikrotik, wireless links, Nagios monitoring, server hardening, client support, and early web development with HTML/CSS/JavaScript.

Education

- Technologist Degree in Systems Analysis and Development - Centro Universitário Internacional UNINTER, 2024 - 2026 (completed May 2026).

Certifications

- IEEE Membership - IEEE (2026, Credential ID 102431427).
- [EF SET Certificate C2 Proficiency \(English\)](#) - EF SET (March 2023).
- [TDD - Test-Driven Development](#) - ITA - Instituto Tecnológico de Aeronáutica (May 2024).
- [Divide and Conquer, Sorting and Searching, and Randomized Algorithms](#) - Stanford University via Coursera (June 2024).
- [Thought Leadership](#) - LinkedIn Learning (November 2023).
- Alura: [Node.js Backend I](#), [Node.js Backend II: MVC, Authentication & Authorization](#), [TypeScript](#), [Docker: Containers](#), [Kubernetes: Container Orchestration](#), [HTTP: Web Fundamentals](#), [JavaScript Advanced: Browser & Design Patterns](#), [JavaScript Advanced: MVC, Proxy & Factory Patterns](#), [JavaScript Advanced: IndexedDB](#).

Languages

- Portuguese: native.
- English: current B1+/B2 proficiency, used professionally every day; EF SET C2 certificate earned in 2023.
- Spanish: intermediate B1 (self-directed study and occasional professional use).
