

Senior Software Engineer | Backend & Platform Engineering | TypeScript, Node.js, AWS | Travel Tech | AI-Assisted Development
Brazil, UTC-3 | Remote / Global | English: professional working proficiency | Email: ivanhoinack@gmail.com
Schedule: [Meeting with Ivan Hoinacki - 30min](#) | [LinkedIn](#) | [Website](#) | [GitHub](#)

AI Projects and Materials

- [Codex Workflow Playbook](#) - playbook with learning journeys I created for the company's developers: how to set up an AI engineering environment optimized for low token cost.
- [Team Claude Config](#) - AI ecosystem I built for the engineering team: 9 rules, 16 skills, 4 agents, 25 hooks, and MCP integrations, installable with a single command.
- [AI Workshops](#) - materials from the AI-assisted engineering training sessions I led for the team.
- [Workshop 02 - Claude Code Ecosystem](#) - slides from the live presentation of the ecosystem.

Summary

Senior Software Engineer and Software Architect with 15+ years of experience building backend platforms, distributed systems, cloud-native services, and product integrations across travel, e-commerce, retail, banking, ERP, and industrial automation.

Most recently worked at Luxury Escapes in the Experiences vertical, building travel technology around provider integrations, booking flows, AI-powered attraction curation, search/discovery, analytics, and operational reliability. Strong hands-on background in TypeScript, Node.js, NestJS, PostgreSQL, MongoDB, Redis, AWS, Azure, Kubernetes, Terraform, CI/CD, Datadog, OpenTelemetry, and GenAI/RAG.

I work well in remote international teams, own ambiguous technical problems end to end, and combine production engineering with architecture, mentoring, code review, and cross-functional product delivery. AI-assisted development is my daily practice: Claude-based coding agents, spec-driven development, context engineering, and AI-assisted code review integrated into the engineering workflow.

Highlights

- Expanded Luxury Escapes' AI-powered attraction curation from 75 attractions in 5 cities to 1,193+ attractions across 18 countries and 56 cities.
- Delivered CustomLinc / South Sea Cruises integration improvements through 14 merged PRs, production deployment, and no documented production incidents.
- Reduced distributed logging costs by approximately 40% at ALLOS through OpenTelemetry and hybrid observability architecture.
- Standardized CI/CD, quality gates, security checks, and engineering governance across 67 repositories.
- Supported 12+ multidisciplinary squads across backend, frontend, mobile, QA, product, and delivery contexts.
- Built web engineering foundations from scratch at Limber Software, scaling from the first web engineering role into multiple specialized teams.

Core Skills

- **Backend:** TypeScript, Node.js, NestJS, Express, Go, Python/FastAPI, REST, GraphQL, gRPC, OpenAPI.
- **Cloud and platform:** AWS, Azure, GCP, Docker, Kubernetes, Terraform, Helm, GitHub Actions, GitLab CI, Azure DevOps.
- **Data and observability:** PostgreSQL, PostGIS, MongoDB, Redis, BigQuery, Snowplow, Datadog, OpenTelemetry, Prometheus, Grafana.
- **Architecture:** Microservices, event-driven systems, DDD, Clean Architecture, BFF, serverless, replatforming, monolith-to-microservices decomposition.
- **AI and automation:** AI-assisted development (Claude, Claude Code, coding agents), spec-driven development, Anthropic API, OpenAI API, RAG, MCP, GenAI governance, prompt engineering, validation guardrails, model workflows.
- **Leadership:** architecture reviews, code reviews, mentoring, technical planning, delivery alignment, engineering standards.

Professional Experience

Senior Software Engineer

Luxury Escapes (luxuryescapes.com), Remote | Melbourne, Australia (February 2026 - July 2026)

Global travel e-commerce company operating accommodation, experiences, tours, transfers, and travel package products across international markets.

- Owned backend and product engineering work in the Experiences vertical: attractions, tours, provider integrations, search/discovery, booking flows, voucher flows, analytics, and operational reliability.

- Designed and shipped backend services and integrations across multi-repository systems involving order flows, customer-facing surfaces, admin workflows, and third-party provider APIs.
- Built and evolved an AI-powered attraction curation pipeline, expanding coverage from 75 attractions in 5 cities to 1,193+ attractions across 18 countries and 56 cities.
- Added validation guardrails to AI-generated attraction data using geocoding, Google Places validation, deduplication, and quality checks.
- Delivered B2B travel provider integration improvements (CustomLinc / South Sea Cruises, Rezdy, and Klook): availability sync, booking flows, vouchers, cancellation behavior, fare/product mapping, and reconciliation data.
- Contributed to the Experiences Passport MVP: backend foundations, data model, endpoints, voucher lifecycle, redemption sync, order integration, search badge, deal page section, and My Escapes vouchers.
- Built operational visibility with BigQuery, Snowplow, and Datadog for product analytics, provider behavior, curation quality, and engineering diagnostics.
- Improved reliability through Datadog APM/logs/monitors, cache warming, rate limiting, rollout planning, and investigation workflows for external provider dependencies.
- Used AI-assisted development as daily practice: Claude-based coding agents, spec-driven development, and AI-assisted code review integrated into the delivery workflow.
- Led an internal technical workshop in English on AI-assisted engineering workflows ([workshop materials](#)) and presented an AI-powered travel intelligence prototype at the Luxury Escapes 2026 Hackathon.

Technologies: TypeScript, Node.js, NestJS, PostgreSQL, PostGIS, BigQuery, Snowplow, Datadog, AWS, Docker, GitHub Actions, OpenAI API, Nominatim, Google Places API.

Solutions Architect

ALLOS ([allos.co](#)), Remote | Brazil (January 2025 - January 2026)

One of Brazil's largest shopping center companies: 56 malls and a distributed digital ecosystem with high transaction volume.

- Led architecture work across platform engineering, observability, security, cloud, DevOps, and AI adoption.
- Supported 12+ multidisciplinary squads across GMV Capture, Benefits, Promotions, Core, BFF, backend, frontend, mobile, QA, product, and delivery.
- Designed a distributed observability strategy using OpenTelemetry, Application Insights, Prometheus, and Grafana, reducing log costs by approximately 40%.
- Implemented technical health dashboards and DORA metrics: Lead Time, Change Failure Rate, MTTR, and Deploy Frequency.
- Standardized CI/CD, GitOps, Infrastructure as Code, SonarQube quality gates across 67 repositories, SAST/SCA, OWASP Top 10 practices, and cloud governance.
- Led generative AI adoption discussions: model versioning, governance, security, RAG strategies, and internal proof-of-concepts.
- Created the Benefits Virtual Assistant (LLM + RAG) for the websites and apps of the 56 malls: per-mall indexed knowledge base, context guardrails, and A/B-tested rollout, reducing in-person service lines and peak-season operating costs; the initiative started as my PoC and evolved into the AI platform squad.

Technologies: TypeScript, Node.js, NestJS, Go, Python, FastAPI, Azure AKS, Azure Functions, Azure Service Bus, OpenTelemetry, Prometheus, Grafana, Terraform, Helm, Kubernetes, PostgreSQL, MongoDB Atlas, Redis.

Tech Lead / Senior Software Engineer

ilia digital ([ilia.digital](#)), Remote | Brasília, Brazil (September 2020 - December 2024)

- Led architecture discussions, technical breakdowns, feature decomposition, and delivery planning for multidisciplinary squads.
- Built and modernized Node.js/TypeScript services using NestJS, Clean Architecture, DDD, REST APIs, distributed messaging, and cloud-native deployment patterns.
- Acted as technical reference through code reviews, mentoring, guilds, engineering standards, and stakeholder alignment with Product, Delivery, and Commercial teams.
- Modernized customer-facing BFF services to NestJS and contributed to migrations from Django-based systems to Node.js/MongoDB services.
- Reduced critical bugs from 69 to 35 in 4 weeks during a high-priority product stabilization effort.
- Took over technical leadership of an international Open Banking project for Santander (UK) after the original Tech Lead left, coordinating 3 squads in a remote multicultural environment.
- Integrated SaltEdge for Open Banking and Onfido for KYC/identity verification in an international banking context.
- Received the ilia Awards 2023 in two categories: Learning and Creativity.

Technologies: TypeScript, Node.js, NestJS, Express, Go, Java, React, Azure AKS, Azure Functions, Azure Service Bus, AWS, Docker, Kubernetes, Terraform, PostgreSQL, MongoDB, Redis, Jest, Supertest, Pact.

Staff Software Engineer / Tech Lead / Senior Software Engineer

Limber Software (limbersoftware.com.br), Pato Branco – Paraná, Brazil (November 2016 – April 2020)

- Joined as the first web engineer and built the company's web engineering foundation from scratch: Linux servers, Git Flow, CI/CD, SonarQube, backend architecture, and frontend standards.
- Scaled the team from an initial 2-person setup into multiple specialized engineering teams across backend, frontend, mobile, and QA.
- Led architecture, delivery, technical planning, client alignment, vendor relationships, and engineering quality across tourism, hospitality, entertainment, e-commerce, and management platforms.
- Implemented CI/CD pipelines, automated builds/tests/deloys, quality gates, security checks, and production traceability.
- Reduced documented vulnerabilities by ~60%, incidents by ~45%, deployment time by ~50%, and increased automated test coverage by ~80%.
- Delivered projects for clients including Itaipu Binacional, Parque das Aves, Serra Verde Express, Magic City Park, Giordani Turismo, Cascaneia Parque, and BWT Operadora.

Technologies: TypeScript, Node.js, Angular, AngularJS, Electron, MongoDB, PostgreSQL, Firebird, Azure, GCP, Linux, Docker, Kubernetes, Jenkins, Azure Pipelines, SonarQube.

Full Stack Developer

XPert Tecnologia e Automação (xpert.com.br), Pato Branco – Paraná, Brazil (February 2013 – November 2016)

- Led modernization of a legacy desktop ERP into a modern web architecture over approximately 18 months without service interruption.
- Replaced legacy systems with a Node.js backend, AngularJS frontend, REST APIs, JWT authentication, and RBAC authorization.
- Reduced new feature development time by ~70% and improved general system performance by ~60%.
- Built integrations with industrial IoT devices, sensors, telemetry, automation systems, MQTT, WebSockets, and real-time dashboards.

Technologies: Node.js, Express, TypeScript, AngularJS, JavaScript, HTML5, CSS3, PHP, MySQL, MongoDB, MQTT, WebSockets, Git, Jenkins, Docker.

Earlier Experience

SESMO Software for Occupational Medicine – Full Stack Developer (October 2011 – February 2013)

Built ASP.NET/C# web applications for occupational medicine, optimized Firebird queries from ~10s to 1s, automated tax/legal reporting, and integrated external government systems.

Viasoft Softwares Empresariais – QA Analyst (October 2011 – September 2012)

Built automated tests with Selenium WebDriver for corporate ERP systems, regression plans, functional/integration tests, and Oracle validation queries.

C&S Systems – Help Desk / Junior Data Analyst (September 2010 – August 2011)

Developed SSRS dashboards, SQL reports, ETL routines, data modeling, and Visual Basic 6 automations.

World Line Net – Network Engineer / Web Developer (December 2009 – August 2010)

Configured Cisco, Mikrotik, wireless links, Nagios monitoring, server hardening, client support, and early web development with HTML/CSS/JavaScript.

Education

- Technologist Degree in Systems Analysis and Development – Centro Universitário Internacional UNINTER, 2024 – 2026 (completed May 2026).

Certifications

- IEEE Membership – IEEE (2026, Credential ID 102431427).
- [EF SET Certificate C2 Proficiency \(English\)](#) – EF SET (March 2023).
- [TDD – Test-Driven Development](#) – ITA – Instituto Tecnológico de Aeronáutica (May 2024).
- [Divide and Conquer, Sorting and Searching, and Randomized Algorithms](#) – Stanford University via Coursera (June 2024).
- [Thought Leadership](#) – LinkedIn Learning (November 2023).
- Alura: [Node.js Backend I](#), [Node.js Backend II: MVC, Authentication & Authorization](#), [TypeScript](#), [Docker: Containers](#), [Kubernetes: Container Orchestration](#), [HTTP: Web Fundamentals](#), [JavaScript Advanced: Browser & Design Patterns](#), [JavaScript Advanced: MVC, Proxy & Factory Patterns](#), [JavaScript Advanced: IndexedDB](#).

Languages

- Portuguese: native.
- English: professional working proficiency (daily working language; EF SET C2 certificate).
